Serial No. 10/774,325 RDID 01062 C

AMENDMENTS TO THE CLAIMS

 (currently amended) A method for producing protein-coated polystyrene microparticles comprising the steps of:

- (a) combining a suspension of uncoated microparticles with a protein, the protein being a partner of a bioaffinity binding pair <u>and having a size from 10 nm to 300 nm</u>, the <u>suspension combination comprising a buffer and having a pH of 10.0 to 12.5</u> 10.5 to 12.5,
- (b) incubating the combination from (a) for a period of time whereby the protein is coated by adsorption onto the microparticles by adsorption, and
- (c) separating the non-adsorbed protein from the protein-coated microparticles.
- 2. (currently amended) The method of claim 1, wherein the protein is in a has been polymerized form by chemical treatment.
- 3. (currently amended) The method of claim 1, wherein the protein is a polymerized streptavidin which has been polymerized by chemical treatment.
- 4. (cancelled)
- 5. (original) The method of claim 1, wherein the microparticles have a magnetizable core.
- 6. (cancelled)
- 7. (cancelled)
- 8. (cancelled)
